SUBJECT: 🚨Imminent Homeland Threat to Hospitals & US Persons🚨

Likelihood of Attack: HIGH –

CT Analyst/Investigator: Jesse Robert, ATO-II, CAS & Commad-Eleven, Askari Media, American Kinetix

---

The CT office has been receiving detailed credible threat warning information that has led us to issue this imminent threat intelligence warning to the US public at large. This memo serves to provide a warning to the public on what and who is being targeted, and possible threat indicators that may signal your location is about to be attacked. Having this knowledge compels us to warn others of this threat as stated per the DNI in Intelligence Community Directive 191. As per ICD 191 which states:

☑️'D. (U) DEFINITIONS I . (U) **"Duty to Warn"** means a requirement to warn U.S. and non-U.S. persons of impending threats of intentional killing, serious bodily injury, or kidnapping. 2. (U) Intentional Killing means the deliberate killing of a specific individual or group of individuals. 3. (U) Serious Bodily Injury means an injury which creates a substantial risk of death or which causes serious, permanent disfigurement or impairment. 4. (U) Kidnapping means the intentional taking of an individual or group through force or threat of force.
1 UNCLASSIFIED// UNCLASSIFIED//'

☑️'E. (U) POLICY I. (U) An IC element that collects or acquires credible and specific infonnation indicating an impending threat of intentional killing, serious bodily injury, or kidnapping directed at a person or group of people (hereafter referred to as intended victim) shall have a duty to warn the intended victim or those responsible for protecting the intended

victim, as appropriate. This includes threats where the target is an institution, place of business, structure, or location. The term intended victim includes both U.S. persons, as defined in EO 12333, Section 3.S(k), and non-U.S. persons.'

BACKGROUND: The CT Office has been in contact by a patriotic group of American citizens who are all former US government, military special operations,civilian-intelligence & contractor employees, who have since left government service, in good standing, and now work or operate in the private sector. The main reporting body is Sarah Adams who at one time held the position of CIA Targeting Officer within that agency. She now works for the Department of Defense and with remaining time, is an established co-author with Dave Benton (former Blackwater) of “Benghazi:Know Thy Enemy”, she continues to independently investigate terror cases such as Benghazi and Abbey Gate (HKIA) and tracking Al Qaeda with an international body, the TIC;. Additionally, retired US Army officer, Lt. Col. Scott Mann, who spent two decades in the Army Special Forces as a Green Beret leader, served in multiple theaters of war. Scott’s also an author of several books including “Nobody is Coming to Save You”, a warrior, storyteller, and the founder of Rooftop Leadership, a consulting firm and is also Host of a podcast. Some other reporting parties include Commander Ahmad Massoud of the National Resistance Front of Afghanistan. And LEGEND." Legend" is a former US Army Intel NCO and key member of Vets4NRF (National Resistance Front of Afghanistan). Legend joined the US Army at age seventeen and served on multiple deployments to the Middle East under the Department of Defense during the Global War on Terror. He now supports the NRF, the last resistance against Taliban rule in the region. Legend is risking his anonymity to bring information to light for the American people. Much in line with recently surfaced news reports, he provides an alternate account of the disastrous Afghanistan withdrawal. Most frighteningly, he reveals that the United States is sending over forty million taxpayer dollars, per week, directly to the Taliban regime. He holds dual US and Afghan citizenship. Together this group has taken it upon themselves, enlisting help from the public such as I, to report and escalate the intelligence that has been developed the last few years. Each of them has appeared via podcast longform interview on the Shawn Ryan show (SRS) appearing independently and as a group. Sarah has appeared on Battleline Tactical Podcast and countless (dozens) others. Scott hosts his own show called "From the Rooftops” and also some private groups on social media. These folks and other veterans (anonymous) have maintained a distant relationship consisting of direct verbal and cyber communications as a backchannel to Afghanistan “in- country” or “boots on ground inside terror camps” HUMINT collectors who are channeling the information to US persons, in efforts to

warn the United States. Their reporting has been vetted against multiple different sources confirming its authenticity and accuracy. According to the source, the CIA, FBI and DHS have all been informed and briefed to some degree, however since they obviously have not developed this intelligence internally L/E/Gov leadership is failing to recognize this impending threat or to treat it as a'real' developing situation, with the exception of NCTC Director Joe Kent who does fully understand the threat. Since these sources have NO federal connection and were developed outside their purview they naturally don't seem to give any of the reporting much weight. That is precisely where I come in as a vetted Infragard-LA member for over a decade, having been cleared "Secret" 22 years and granted "Q" access authorization through the Department of Energy/NNSA for several years. I am a security & intelligence professional, currently in limbo pivoting careers and attending college remotely. As such I have had time to invest in tracking this subject at length and in depth. I have been tracking all of this data since 2022.

Command-11 is an additional source, is a Pakistan based Private Intelligence CT/Threat Intelligence organization that continues to investigate the US/EU Homeland Plot, and continues to monitor embedded social media intel channels enabling them to consistently provide updates to us here in the US, they are operated by CEO Khalid Muhamaad (US Person).. They have also been monitoring, documenting and analyzing probe attacks during the last year, which are analyzed and reported via private distro and sometimes on their web. Concerned members of the public, such as myself, have access to a X (twitter) Group Labeled XXXXX. The group members actively POST incidents of significance, practice group collaboration and information compilation. We all consider ourselves purveyors of "WARNING". Personally, since I am a trained intelligence analyst via the Counterterrorism Group I adhere myself and my personal ethics to ICD-213 Duty to Warn. Although I am not mandated due to NO employment affiliation with any particular federal agency, I still feel that as a good American Citizen I have personal responsibility to share this threat information with my American brethren.

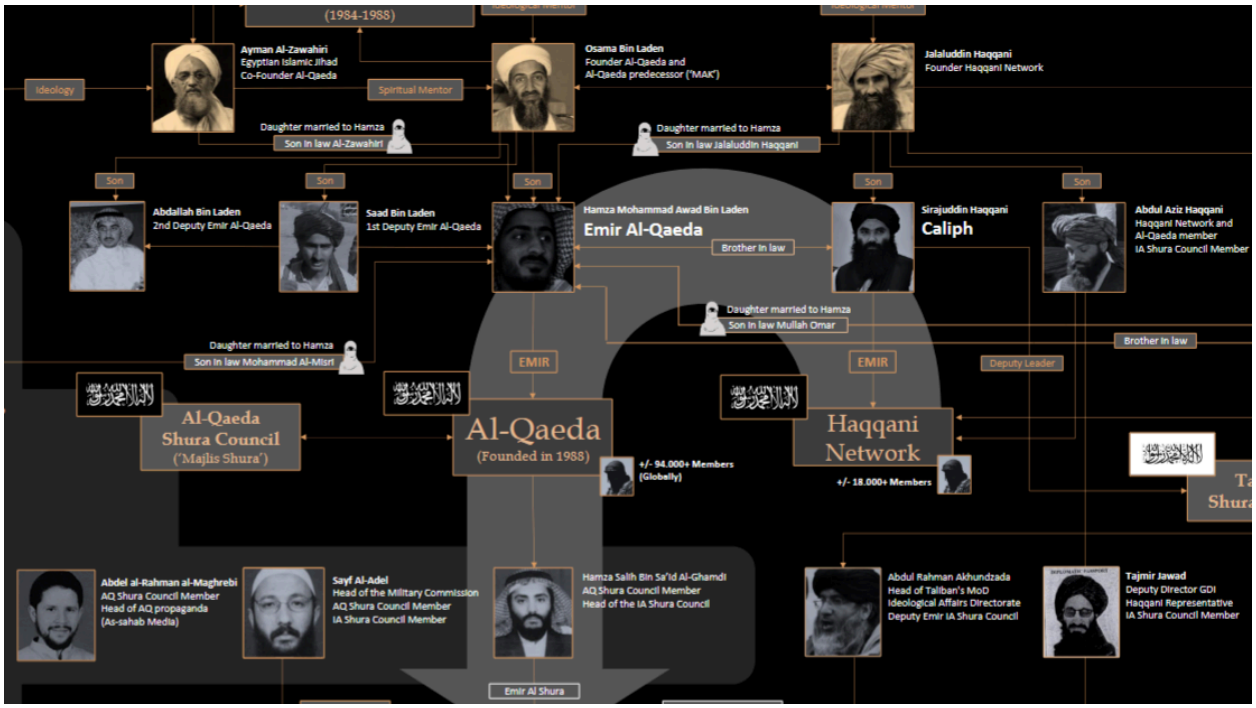
WHAT WE KNOW: Al Qaeda, currently led by its Emir Hamza bin Laden and other children of the late Usama bin Laden (UBL), Abdulla and Saad, have created a new organization called the **'THE ARMY OF IMAM MAHDI'** aka **'Mahdi Army'** or **Islamic Army**. This group is a

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

conglomerate, solely composed of various middle eastern, radical, Wahhabi/Salafi jihadist groups such as ISIS, Taliban, Haqqani Network, Ansaralla including Iran and a dozen others.



(**Source:**https://trackingalqaeda.com/downloads/TIC/Understanding_Global_Jihad_The_Islamic_Army_-_Army_of_Mahdi_WHITE.pdf)

Many of these groups traditionally do not get along with one another. However, they have set aside their differences even differing religious beliefs like Sunni/ Shite and banded together for a common cause. That particular cause is to wage war against the West and our allies. To conquer our lands and to fully establish a global Islamic Caliphate. Verified intelligence sources have stated that there are over 42 new jihadist training camps in the Af/Pak region. Several of these training facilities include scenarios involving hospitals. Others are committed to training future suicide bombers. Specifically, what this group aims for and wants is, to export jihad or to "bring the battlefield to our front yard", in our lands where our homes are, where our children go out to play and learn. They, the Mahdi Army, are led by its Emir Hamza bin Laden, who was thought to be killed in a US drone strike, but is alive and well. Him and his brothers Abdulla and Saad and family compatriate Saif Al Adel. They seek revenge for their fathers death (UBL) , a targeted terrorist or unlawful combatant who was killed by US forces in Abbottabad Pakistan in 2011, and again, to bring the darkness and tragedies of war to the soil of our lands (USA). Whether we like war or not, the Islamic Army is at war with us, and they are determined to

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

destroy us before erecting a Caliphate. The radical religious “Islamist” who are present within US borders are entirely cut from the same cloth as “Jihadist”, they also seek destruction of the US and wish to see our government overthrown. Yet, the Islamist have temporarily laid down their swords to destroy us via the pen, as they conduct themselves as clandestine operatives, while living and operating amongst us. They do this by hiding behind 501-3c religious charity organizations such as CAIR, ISNA, MSA, ICNA etc to mask ulterior motives and intentions (see book Muslim Mafia). Many operate mastering DECEPTION within the political sphere and advocate for Muslim rights and other related causes such as social,racial and gender justice , “Inter-Faith” outreach, all seemingly legitimate. However, behind closed Mosque doors they plot western demise and many of their proceeds go directly to support terrorist operations around the world. Designated FTO Groups such as Hamas have been leveraging these charities, along with other facilitators for decades, and now they are being used to strategically coordinate mass protests, riots, violence and property destruction at US universities, college campuses and other locations of strategic value. NCTC Director Joe Kent recently testified to what we have been shouting for years that **Eighteen Thousand** verified known or suspected terrorist (KST) terrorists (**18**k) are within US mainland borders. In addition to the thousands of terrorists who have infiltrated the US during the Biden administration, there are also hundreds of existing Hezbollah and Hamas operatives **on US soil** as has been confirmed by the FBI. It would only take one phone call from Iran or Afghanistan as command control (C2) mechanism to activate any portion of these terror networks and put these operatives in motion to carry out devastating terror attacks on soft targets.

This report is based in part on information originally generated by Source (s): American/Kinetics and @TPASarah and @BenghaziAttacks and @commandeleven who have boots on the ground protected sources in Afghanistan & Pakistan some actually having “access” to the training camps. Additional sources, are the Transatlantic Intelligence Consortium (TIC). Director Joe Kent Dec,11th- Testimony

SITREP:

WHO: AQ, ISIS-K (Islamic State Khorasan Province) (‘THE ARMY OF IMAM MAHDI’)

TARGETS: Hospitals across multiple mid-tier U.S. cities

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

TACTICS: Simultaneous VBIED explosions → armed attacks → hostage-taking

TIMING: Expected before Al-Q'aida's aviation/D.C. attack, likely within weeks

INTELLIGENCE SOURCE: Chatter from ISIS-K training camps in Afghanistan confirms operational planning is advanced

PREVIOUS SIGNS: Reports indicate possible pre-attack surveillance at hospitals—urgent review of security footage needed. (12/22/25) At this point pre-attack surveillance has likely occurred, but they will still conduct pre-operational surveillance just before attacking, seeking an opening when victims are least attentive, most vulnerable or a "Go-Time" pre-event.

WHY THIS MATTERS:

Hospitals are easy, high-impact targets – ISIS-K is exploiting weak security to maximize casualties and psychological terror.
Multi-city coordination is a SIGNIFICANT escalation – This is NOT a lone-wolf attack.
Precedes a larger Al-Qaida event – This operation is strategically timed to destabilize U.S. security before a bigger attack.

KEY JUDGMENTS:

Likelihood of Attack: **HIGH** – Intelligence appears to confirm active preparation.

Method: Multi-city simultaneous strikes – Expect explosives, gunmen, and hostages.

Strategic Purpose: Maximum terror & destabilization – ISIS-K seeks to disrupt U.S. security ahead of Al-Q'aida's attack.

MOST LIKELY SCENARIO (MLCOA): - Coordinated hospital attacks occur within weeks. - **VBIED** detonations cause mass casualties. - Armed terrorists storm hospitals, take hostages. - ISIS-K claims responsibility, proving operational strength.

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

MOST DANGEROUS SCENARIO (MDCOA): - Simultaneous multi-city attacks on hospitals AND critical infrastructure (police stations, transport hubs, etc.). - Overwhelms emergency services, triggering nationwide panic. - Disrupts healthcare system just before Al-Q'aida's planned aviation attack.

LEAST LIKELY SCENARIO (LLCOA): - Security measures disrupt attack planning before execution. - Key operatives arrested, ISIS-K shifts focus to secondary targets.

RECOMMENDATIONS Analyst Note: Hospital security is very lax in comparison to other secured key public infrastructure. Hospitals should immediately increase overall security posture.

Analyze hospital security footage – Look for reconnaissance, repeat visitors, suspicious activity. Deploy law enforcement to hospitals – Increased presence at emergency rooms, trauma centers.

Restrict vehicular access – Deter **VBIEDs** with barriers, restricted zones. Emergency drills & active shooter response – Prepare staff, law enforcement, and medical teams. Prepare for an armed stand-off.

Investigate and terminate access for any missing/lost or stolen electronic key card or access control devices. All master and grandmaster keys are accounted for.

Preemptive counterterrorism raids – Monitor ISIS-K networks in the U.S., identify logistics, disrupt operations. **THIS IS A CREDIBLE, IMMINENT THREAT** While we certainly hope it doesn't materialize / law enforcement interdicts the bad guys, failure to act now could result in mass casualties, widespread panic, and a catastrophic national security failure.

Hospitals should be secured. Intelligence sharing should increase. Law enforcement should increase alert levels and presence in / around hospitals.

What is a Mid-Tier U.S. City? Why Does it Matter for Security Threats?

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

In intelligence and counterterrorism, mid-tier U.S. cities are prime targets for hostile actors like ISIS-K. These cities fall between 100,000 and 500,000 residents, making them large enough to host critical infrastructure like **Level One trauma** centers but lacking the intense security of major metros like NYC or D.C.

Why Do Mid-Tier Cities Matter? Big enough to make headlines if attacked, but small enough to be more vulnerable. Hospitals, airports, & transit hubs exist, but without the same federal security presence as top-tier metros. Local law enforcement may not have advanced counterterrorism coordination, making emergency response slower. Lower surveillance density allows bad actors to operate without immediate detection.

Examples of Mid-Tier U.S. Cities:
Tulsa, OK (413K)
Colorado Springs, CO (489K)
Buffalo, NY (278K)
Des Moines, IA (212K)
Chattanooga, TN (181K)
Boise, ID (240K) Toledo, OH (270K)
Wichita, KS (396K)

Why ISIS-K Targets Mid-Tier Cities- Hospitals & trauma centers make high-casualty targets. Low federal presence = delayed countermeasures. Smaller airports with weaker security protocols. Symbolic targets that strike fear nationwide but avoid immediate military reprisal. Disrupt daily American life with sustained panic. #ISIS #TerrorThreat #NationalSecurity #AXIntel

You're dead on, Harden.

UPDATE:/ / 11 APRIL 2025

The below comment was made by a trusted and verified source regarding the jihadist presence within the USA and subsequent training tactics,techniques and procedures aka tradecraft used to drill their attack scenarios. This is a training methodology I've had the opportunity to engage in, with the US Marine Corp West Coast FAST Teams at Camp Pendleton, Ca and, also with US Special Forces 19th Group, both of which utilize paintball to simulate tactical combat scenarios an additional method would be Simunitions. All paintball field operators should be observant of

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

clientele exhibiting suspicious behaviour and also middle eastern descent. Suggest CCTV Cameras for parking lots to observe activity and record vehicle license plates. Security staff should be alerted to recognize this. **If activity is observed, escalate detailed information to the nearest FBI or DHS office (reference this report).**

"These attack scenarios have been run hundreds of times, with different variations, in terror camps in Afghanistan. They were then moved into the US via manufactured immigration documents.

What most people don't know, other than @tpasarah, is "they would assemble in the Arizona desert to practice again. They've rented paintball arenas to practice simulations. They are actively preparing, while the US government continues to deny a credible threat."

We, that's the collective we of CT operatives, wish the dead weight running CT community in the US would resign and let qualified, motivated, experienced and intelligent individuals step in and defend the US homeland.

This is not a job for cronyism, favoritism or arrogance.

One successful attack on US soil will decimate the CT structure because so many of us have been screaming, while they operate in an echo chamber of TV interviews and public appearances."

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

Bottom Line Up Front (BLUF):

Hospitals and Tier 1 trauma centers are being targeted for attack by the Islamic State Khorasan Province. The targeting is focused on mid-tier cities around the United States and Canada. The attacks will be multi-city and simultaneously carried out.

Intelligence Credibility: Credible – Highly Credible

This intelligence was gathered by CommandEleven human intelligence assets inside of Islamic State Khorasan Province training camps in both Afghanistan and Pakistan. These assets have been providing information since the end of January, but intelligence became more detailed starting in mid-February and continues to flow into our intelligence classification center.

This information was reviewed in detail, compared with additional intelligence gathered from other sources, classified based on credibility, and sorted into understandable information that was first passed to external analysts that collaborate with CommandEleven, then passed to law enforcement and intelligence agencies in the United States.

Second, there are already numerous terrorist sleeper cells already inside the United States and Canada, as well as individuals actively being radicalized, whose identities are still unknown to any analyst.

Our estimation, based on the chatter within the camps, is roughly 30-50 operational sleeper cells within the United States and Canada at this time, with more cells being created weekly.

Therefore, it should be clear that **this attack will be carried out by terrorist who are already in the United States**, not individuals infiltrating the United States specifically for this attack.

SitRep:

- US internal security has been seriously compromised due to the Biden open borders policy, which facilitated the infiltration of terrorists from the northern and southern border of the United States
- A second tier was also infiltrated into the United States via manufactured passports from the Sirajudin Haqqani controlled Afghanistan Immigration department
- These terrorists have taken safe haven in predominantly high-Muslim population areas, university campuses, and suburbs of mid-tier cities, where movement can easily be made for reconnaissance and surveillance purposes

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

- The following links have been identified:
    - Hospitals that have been targeted via cyber-attacks or ransomware have also been targeted with surveillance and attempts to breach/test security protocols
    - Since our alert on March 18th, numerous reports have been received of suspicious individuals been seen, captured on video and interacted with hospital staff members inquiring about hospital security protocols
- On March 02, jihadi groups circulated a graphic with US hospitals circled in red with the title – “Soft lesh awaits”

Expected Tactics:

There have been a number of “tests” that have been carried out to test the following:

- First responder response time
- Which first responders respond
- Reaction of the general public in real-time to determine additional attack opportunities
  One key item that we have been able to identify is that the hospitals that have been targeted with either cyber-attacks or ransomware attacks, have also been targeted for surveillance and reconnaissance. We have included a list of known cyber and ransomware attacks in an appendix.

We believe the New Orleans attack on January 1st was a test, using a method successful in European cities, with the addition of an explosive that was not detonated – IEDs were strategically placed around the accident location and on routes that would be used by first responders.

The methodology test was to penetrate the first layer of security and detonate a vehicle-based improvised explosive device (VBIED), causing mass casualties, when first responders entered into the attack area, the planted IEDs would be detonated delivering a second level of casualties.

Potential Attack Scenarios:

Based on the human intelligence (HUMINT) that has been gathered and confirmed, we have been able to identify 3 different potential attack models:

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

- 11/26 Mumbai attack
- 10/07 Israel attack
- 03/03 Mannheim, Germany attack

Again, based on the conversations in the terror camps in Afghanistan and Pakistan, the attack scenario will start with:

- a VBIED breaching the main level of the building and detonating
- followed by small assault teams taking control of the hospital, with hostages, including high ground for snipers against any law enforcement and first responders
- this will be a multi-city, coordinated attacks designed to hit the US at its weakest security point with the highest psychological impact – hospitals

We believe, based on the intelligence chatter that we are receiving, the attack will be a mixture of both the Mumbai and Mannheim attacks.

Impacts:

For intelligence and terrorism officials, mid-tier cities present the hardest targets to protect and identify potential threats. A mid-tier city is defined as those cities whose population falls between 100,000 and 500,000 residents, making them large enough to maintain LEVEL ONE trauma centers, but lacking the security of metropolitan cities, such as New York City, Los Angeles, Chicago, Washington, DC.

The selection of a mid-tier city is made based on specific criteria:

- large enough to get media attention, but small enough to be vulnerable
- all infrastructure of major cities exists without the same security presence as top-tier cities
- law enforcement will most likely not have advanced counter-terrorism training, meaning the attack can be sustained while reinforcements with advanced training are able to reach the location – slowing emergency response
- significantly lower surveillance allowing terrorists more freedom of movement without detection

Mid-Tier Cities Believed to be Vulnerable

The list provided below is based on numerous criteria, as defined above:

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

- Langley, Virginia
- Richmond, Virginia
- Madison, Wisconsin
- Seattle, Washington
- Spokane, Washington
- Milwaukee, Wisconsin
- Marshfield, Wisconsin

We are also closely reviewing areas where there is a large population of recently immigrated Muslims from Afghanistan, Syria and Iraq, who we believe could have terrorist ties and used manufactured (fake) passports to enter the United States during the Biden administration, when there was no vetting or security check. This is not a warning against all Afghans, but those whose passports are questionable, meaning carrying the birthdate of 01/01, 06/01 and 12/31/xxxx, which we have found many matches to this characteristic to avoid detection by immigration officials.

We have learned that there are many new employees from the above mentioned countries with passports that match the date sequences given that should be given special attention and review.

Why Mid-Tier Cities:

We have determined mid-tier cities are being targeted for the following reasons.

Soft Targets

Major cities often have heightened security, greater counter-terrorism resources, and more robust surveillance systems, mid-tier cities, while still populous and symbolically important, usually lack the same level of protection, making them more vulnerable.

Maximized Disruption

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

Attacks in these cities can still generate significant media coverage and public fear. By striking locations that are not typically seen as likely targets, terrorists can amplify the psychological impact and spread anxiety across a wider region.

Symbolic Impact

Mid-Tier cities often represent the “heartland” or more everyday aspects of society. Attacking these locations may be aimed at demonstrating that no place is immune from violence, thereby undermining the sense of security in communities that might otherwise feel overlooked by national security priorities.

Operational Logistics

These cities may have infrastructure and transportation hubs that can be exploited for logistical support or as targets that cause broader disruption without the need for the high-profile elements of larger urban centers.

Additional Points

- Hospitals and trauma centers make high-casualty targets
- Smaller law enforcement budgets that large cities often prohibit funding for certain counter-terrorism measures including, but no limited to:
    - Advanced intelligence analysis
    - Surveillance technology
    - Tactical counter-measures
- Low federal presence = delayed counter-measures
- Disrupt daily American life with sustained panic
- Symbolic targets that strike fear nationwide but possibly avoid immediate military reprisal

Recommended Security Measures:

1. Hospitals and trauma centres to complete full audits of their internal security protocols to limit the potential of a successful breach by ISKP terrorists
    1. Reviews of hospital security footage, attempting to identify any reconnaissance activities, repeat visitors, and suspicious activity.

2) Perform a more comprehensive vetting of all newly hired (within the last 2 years) employees, contractors and their staff, service teams and vendors with building access

1) The restriction of specific vehicular access with barriers to allow for complete search of the vehicle by explosive sniffing dogs and questioning/identification checks of individuals.

a) We are **highly concerned about the possibility of terrorists infiltrating hospitals in uniforms or mimicking hospital dress codes to avoid detection**. Hospital security must be heavily tightened to assure that modified identification credentials are not successfully used to gain entry.
b) Secure perimeter access – emergency rooms, loading docks and parking structures – where easy access can be used to infiltrate without alerting hospital security
c) Hospital security staff must be enhanced and perform practical drills to prepare for the potential of a breach attempt. This will require coordination with local law enforcement to gain strategic advantage over the terrorists.

Identification and access badges MUST be checked on a regular basis to assure that fake badges are not created to gain entry to secure areas of hospitals and trauma centers

1) Special attention must be paid to hospitals and trauma centers that have tunnels under their facilities. They must be heavily secured and searched to assure that no explosives have been planted there, nor can any unauthorized individuals gain access through those routes.

2) Law enforcement, intelligence and security agencies of the US and state governments actively identifying and arresting key operatives and disrupting the attack before it can be initiated

a) Pre-emptive raids on known radicalised centres, where ISKP fighters could seek safe haven until the attacks are carried out
    2. Examination of storage facilities, locations close to, and within hospital premises, where weapons could be stored and easily accessed once the breach is achieved by terrorists.

Appendix A: Known Cyber Attacks on Health Care Facilities 2025

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

- **Jan 02 – CYBER** – Connecticut – Community Health Center (CHC) USA breach which exposed the data of 1 million patients
- **Jan 24 – SWAT** – Loma Linda, California – Hoax call (swatting) of armed gunmen threatening to “shoot up” the Loma Linda University Medical Center triggered a massive police response, causing paediatric and surgical ward to be evacuated. News media speculated that it was a test of police response times
- **Jan 26 – CYBER** – Eden Prairie, Minnesota – Ransomware attack on Change Healthcare stealing approximately 190 million patient records – largest healthcare data breach in US history
- **Jan 29 – CYBER** – Fredrick, Maryland – Ransomware attack shuts down the entire Fredrick Health Medical Group
- **Jan 30 – CYBER** – New York, New York – New York Blood Center ransomware attack stops all blood donations
- **Feb 07 – CYBER** – Springfield, Illinois – Hospital Sisters Health Systems breached exposing over 882,000 patient records
- **Feb 24 – KINETIC** – Spokane, Washington – Fire outside regional hospital forces a full evacuation of the hospital
- **Feb 24 – KINETIC** – York, Pennsylvania – Gunman took staff hostage at University of Pennsylvania Medical Center Memorial Hospital, resulting in the death of a police officer and injuries to others. Gunman was killed on the spot.
- **Mar 14 – SWAT** – Pasadena, California – hoax call (swatting) at Huntington Hospital of an individual with a weapon, which caused the hospital to be placed on lock down.
- **Mar 14 – SWAT** – Marshfield, Wisconsin – Hoax call (swatting) of six bombs inside the hospital and an armed individual outside the hospital. Police called it a case of “domestic terrorism”
- **Mar 18 – CYBER** – Cyber Alert – FBI/CISA report a spike in Medusa ransomware attacks, including hospital
- **Mar 20 – KINETIC** – Troy, Michigan – Shooting in Corewell Health Beaumont Troy Hospital garage, 2 full access security key FOBs found in the hospital after the breach, suspect was arrested after a prolonged chase
- **March – CYBER** – Ohio State University Hospitals major cyber-attack that collapsed the entire system for almost 2 days

While this assessment is based on current intelligence, as we gather more intelligence, we will be updating and enhancing the threat assessment.

IMMINENT THREAT WARNING

BOLO

FOR Threat REPORTING OR QUESTIONS CONTACT: JR005-sentry-ops@proton.me or via X on Social @Jesse_R_805 . To report suspicious activity or emergency contact 911 or your local FBI field office.

As we have proceeded to count down, without ample warning to the public (exception Survival Dispatch News) to the opening of the terrorist “operating window”. This period being the most prime and optimal for attack, yielding high body counts with assortment of soft-targets during the Holiday season, maximum psychological impact, along with the symbology or significance makes us ripe for attack. We will likely see more individual acts of terrorism culminating into the main event, from now till January or even February. Analyst more close to plot details indicate the window could extend to March. After the initial attack there is expected to be a volley of random follow-on attacks prolonging the state of fear for months. Again this will highly likely cause an immediate “paralysis” as an impact on society and the economy. All these are desired terrorist effects and outcomes of this thoroughly planned attack.

Analyst Note: 11/27/25

I’ve been told that overseas counterterrorism operations against the Taliban and (thus AQC due to integration) could accelerate or stall/damper US foreign terrorist operations already in motion.

Analyst Note:12/4/25-***Tactical Considerations-*Preparation****

ADVISORY: All potentially responding deputies/officers, reservist, detectives bureau (robbery/homicide/major crimes),sworn investigators etc. Should have in their gov/POV vehicles (at all times) full body armor kit with level (4) (IIII) rated hard plates sufficient to withstand common rifle rounds. Ballistic Helmet. Each vehicle should have at minimum one (1) AR-15 platform rifle system, easily deployable (yet properly secured) with quick access to a minimum of six (6) twenty/thirty round capacity magazines (5.56/.233) preferably eight (8), providing user ability for extended and sustained engagements with multiple terrorist subjects, or until, special weapons and tactics (SWAT) or Special Enforcement Teams(SET)_, LE rescue task force (RTF), additional responding officers are sufficiently dispatched etc.

—----------

Analyst Note (12/04/2025): *Tactical Considerations-*AMBUSH Anticipation**

The main issue I see here is the initial LE response to an active shooter at hospital call or Hoax “**Officer Needs Assistance" (ONA) call for help.** Anticipation of active attacker “LE ambush”

COUNTERTERROR BULLETIN

IMMINENT THREAT WARNING

BOLO

upon initial response is KEY. LE dispatch and officers in the field need to use extreme self-desecretion upon initial response and make serious efforts to avoid the proverbial 'dogpile of response vehicles' at any given scene, but especially for '***officer down***' or '***active attacker***' calls for service. Let the closest units first **'assess**' Hot/warm/Cold zones ***before allowing additional units to ascend on scene, this includes fire and medical***.

All waves of first-responders need to ensure there is a **cleared scene perimeter,** clearing (by **physically checking**) any ***hide/barricade spots*** (rifle fire/VBIED), ***elevated firing positions*** (scoped rifle/RPG), ***elevated recessed firing positions*** etc. First on scene officers need to **immediately stop the killing**, but should make every effort to **notify dispatch or other responding officers** (car to car) to inform on **how many attackers are actually on scene and their locations** in comparison to the **Incident Command Post**, which **should NOT be established as protocol normally dictates, *until the actual set established perimeter has been deemed 'clear' of potential attackers*** . Once perimeter is set, officers should stand post (watching backs) until initial responders have neutralized/captured suspect(s) and cleared the incident.

Analyst Note: 12/04/2025

In recent weeks, several Afghan nationals have been arrested across the U.S. in connection to terrorism or serious crimes, prompting a federal review of their entry into the country under "Operation Allies Welcome"
. Key arrests and incidents include:

- **Jaan Shah Safi:** Arrested by U.S. Immigration and Customs Enforcement (ICE) agents in Waynesboro, Virginia, on December 3, 2025. He is accused of providing support to the Islamic State of Iraq and Syria-Khorasan (ISIS-K) and supplying weapons to his father, an alleged militia commander in Afghanistan.
- **Rahmanullah Lakanwal:** The suspect in an ambush shooting that occurred near the White House on November 26, 2025, which resulted in the death of National Guard member Specialist Sarah Beckstrom and critical injuries to another guardsman, Andrew Wolfe. Lakanwal, an Afghan national who entered the U.S. through Operation Allies Welcome, has been charged with first-degree murder.
- **Mohammad Dawood Alokozay:** Arrested on November 25, 2025, in Fort Worth, Texas, for making bomb threats. He allegedly posted a video on TikTok indicating he was building a bomb with an intended target in the Fort Worth area and also expressed a

desire to conduct a suicide attack on Americans. He faces state terroristic threat charges and federal charges of transmitting a threatening communication.

- **Abdullah Haji Zada and Nasir Ahmad Tawhedi:** In November 2025, Zada was sentenced to 15 years in federal prison for his role in plotting an ISIS-inspired terror attack on Election Day in November 2024, targeting large gatherings of people in Oklahoma City. His co-conspirator, Tawhedi, was also arrested in October 2024 and charged with conspiring and attempting to provide material support to ISIS.
- **Luqmaan Khan**-A 25-year-old Afghan national was arrested at the University of Delaware for allegedly plotting a mass shooting. Luqmaan Khan was arrested for allegedly planing a school shooting. The NYP claims he had writings in his notebook that said, “kill all – martyrdom.” He allegedly told cops that becoming a martyr was “one of the greatest things you can do.” SOURCE: New York Post

In response to these events, U.S. Citizenship and Immigration Services has announced an immediate suspension of all immigration applications from Afghan nationals, and the U.S. government is reviewing all cases of Afghans who entered the country under the Operation Allies Welcome program.

—----------

Additional Cases of Relevance:

Pakistani Nationals

- **Asif Merchant:** A Pakistani national with alleged ties to Iran was charged in September 2024 with attempting to commit an act of terrorism and murder-for-hire as part of a plot to assassinate a U.S. government official or politician on U.S. soil.
- **Muhammad Shahzeb Khan:** A Pakistani citizen living in Canada was arrested in September 2024 (and later extradited) for plotting an ISIS-inspired mass shooting in New York City.

Iranian Nationals

- **11 Individuals:** In June 2025, ICE arrested 11 Iranian nationals who were illegally in the U.S. Among them was Mehran Makari Saheli, an alleged former member of the Islamic Revolutionary Guard Corps (IRGC), who admitted to connections with Hezbollah, a U.S.-designated foreign terrorist organization.

Jordanian Nationals

- **Mohammed Abdul Kader Khalil Saleh:** A Jordanian citizen was removed from the U.S. by ICE in January 2024 after completing a 20-year prison sentence. He had been convicted of conspiring to bomb government and military buildings and was tied to the 1993 World Trade Center terrorist attack conspiracy.

Central Asian Nationals (Kazakhstan, Tajikistan, Turkmenistan)

- **8 Tajik Nationals:** In June 2024, eight men from Tajikistan with suspected ties to ISIS out of Central Asia were arrested by ICE after crossing the Southern U.S. border. They were arrested on immigration charges after an FBI counterterrorism probe found potential terror links, leading to fears they might be plotting an attack on U.S. soil.

- **Uzbek National:** In May 2024, an Uzbek national associated with ISIS was arrested after living in the U.S. for two years following his release by Border Patrol.

Analyst Note:

In the month of 2023 intelligence reports from two separate reporting entities, one south of the U.S border and one within the US territory, reported that they had confirmed intelligence that several **rocket propelled grenade launchers(RPGs)** and associated **munitions** were successfully clandestinely transported into the United States, bypassing customs (CBP) and border protections safeguards, protocols and mitigation strategies. The nomenclature of the military class hardware was of Middle Eastern origins, highly likely Iranian hardware. As a result of these confirmed reports (at the time) the US President had his flight-plans, security and schedule modified to mitigate any threat.

Analyst Note:I personally saw no federal intelligence bulletin or product on this issue. This was not picked up by legacy media aka mainstream media (MSM) outlets and mainly only discussed in conservative spheres. There may be a product on file out of Texas or Secret Service(DHS).

OFFICER AWARENESS

Analyst Commentary : S. Adams
A different magnetic bomb design than the one shown in AQAP's June 2025 video threatening the U.S. homeland, which featured a wind-activated switch. The key takeaway remains the same: if law enforcement or first responders are not sweeping for sticky bombs, that lapse in basic due diligence could take them out of the fight before they ever have a chance to respond to an attack here.

Source :
Dec-15-2025- Insiders/Supporters Circulate Manual on How to Build Magnetic Improvised Explosive Devices (#IEDs) ('Radio-Controlled Magnetic Anti-Vehicle Mine') in Russian. #ISIS
Read more: trackingterrorism.org/chatter/is-ins…

The subjects referred to in this memo are highly trained in **guerilla warfare tactics, techniques, and procedures (TTP**) specifically in the use of "Sticky Bombs" traditionally using tree sap to affix bombs to vehicles, primarily used overseas. They are now using semi-powerful magnets to affix deadly devices.

Directive-

Before embarking from the motor-pool or transportation yard. COMPLETE a full 360 degree comprehensive search of the perimeter outside of the vehicle, to include wheel wells and undercarriage. You are searching for an explosives charge meant to, at minimum, disable the vehicle, preferably kill or wound any available responding officers. **Do not attempt to disarm**. Devices may be booby trapped-Back away, clear the area, notify dispatch or EOD.
